

## Buffalo Turbine Partners with Clarke in Distribution and Development Agreement

**October 14<sup>th</sup> 2016-**

Buffalo Turbine of Springville, NY has entered into a distribution and development agreement with Clarke, the public health mosquito control company based in St. Charles, IL.

Clarke will be the exclusive distributor of Buffalo Turbine insect control and dusting application equipment for public health mosquito control larvicides and adulticides in the United States, Territories and the Caribbean. Clarke and Buffalo Turbine will also partner in development work to optimize ultra-low volume application of larvicides, valuable in controlling container-breeding mosquitoes that can carry Zika, Dengue and Chikungunya viruses.

Clarke welcomes the addition of the Buffalo Turbine line to an existing line of exclusive ultra-low volume application equipment, providing sales, parts and customer service support.

Buffalo Turbine has been manufacturing turbine style blowers and sprayers since 1945, which are made, using high-precision machined components resulting in long-lasting dependable products. These turbine units are being used worldwide in a variety of applications. Popular applications include golf/turf, paving contractors, solar farms, poultry barns, airports, racetracks and many more.

### **About Clarke**

Clarke is the leading provider of mosquito control products and services in the United States, and product sales in over 45 countries internationally. A family-owned business since 1946, our mission is to make communities more livable, safe and comfortable for families around the world. We do this by pioneering, developing and delivering environmentally responsible mosquito control and aquatic services to help prevent disease, control nuisances and create healthy waterways.
